CLOSING THOUGHTS: Elden Ring is an RPG with a large degree of freedom. An RPG with massive scale, but a relatively simple battle system of fusion, combat action. As far as action RPGs go, it is more than a game, it is a vivid dream. From the first moment I started playing, that sense of wanting to keep playing never leaves my mind, regardless of time or place. I foresee it becoming a RPG game that pulls in people who appreciate its scale and giant world.

Double-quantum gates are constructed via the coupling of the resonator modes between a lumped microwave resonator consisting of a Josephson junction and a parallel coplanar waveguide and an electronic feedforward superconducting flux qubit operated in the dispersive regime. Two-qubit Gates are constructed from two-quantum gates using a NMR-type experiment. Experiments show excellent fidelity and versatility, making this scheme a promising way to construct a universal set of quantum gates.Q: Vue-cli - Push develop branch to different repo I'm new to Vue. Radiochemical purity of 131-I preparations are an important factor which influences their therapeutic effectiveness. The aim of the study was to assess the level of radiochemical purity of 131-I preparations used for treatment of patients with Graves' disease. Radionuclide purity was determined by aqueous emulsion coated with 13xenon. The studies were performed in 10 departments of nuclear medicine in Poland. The investigation was carried out during the five-month period during 2013. The study included analysis of the results of a selection of 131-I preparations and the determination of their relative content of such radionuclides as: I131, Xe 131, 123-I, 123- 122-, 124-I, 132-I, 134-I, 135-I and 137-I. 166 requests for the evaluation of radiochemical purity of the investigated preparations for treatment of Graves' disease were analyzed. From each individual request one preparation was selected to ensure the representativity of the study. The selection was made by random numbers. The selection involved 10 departments of nuclear medicine of 15 regions of Poland. The analysis of results showed that for 29 (18 %) requests for samples of a toxic origin and for a total of 27 (17 %) requests the criteria for good quality were met. The mean radiochemical purity of all studied preparations was 96.2 ± 0.5, while for preparations suitable for radioimmunotherapy (RIT) the mean value was 98.3
