Basic Photoshop Tips Photoshop is a complex program with many features. Use the tips below to be a better user. 1. Learn shortcuts and workarounds One of the most powerful features of Photoshop is that it is a vector-based tool. This means that the Photoshop user can resize, edit, move and rotate multiple layers and objects at one time. However, this means that Photoshop comes with its own set of commands (called shortcuts) that help you get to your goal faster by making multiple edits more streamlined. For example, if you want to crop to the right of a picture, you don't have to keep selecting the crop layer, then the picture layer, then finally the layer you wish to crop. You can just do this in one step: go to Select > All and crop to the right. Similarly, you can quickly select all the art in a layer by going to Select > All, and then deselect the art on the layer: (Layer > Layer Properties > Invert). Even if you're familiar with the keyboard shortcuts, it can help to do a quick rundown of the main commands to create more efficiency, and this is an exercise I would recommend beginners do whenever they get stuck. 2. Use shortcuts to add text and layer effects As you develop in Photoshop, you'll need to add text and other effects to your layers. Text is easy enough to add because there is a limited amount of

Immediate loading of implant-supported single-tooth crowns using a 3-step surgical protocol: A 3-year prospective clinical follow-up study. Immediate loading is an important tool for improving patient satisfaction and enhancing the esthetics of the

dentition, but its limitations in certain circumstances call for immediate implant placement to be used for single-tooth restorations. Thus, the aim of the present study was to evaluate and compare the clinical outcome of immediate implant-supported single crowns using a 3-step surgical protocol. A total of 33 implants supporting single crowns (Cerestore; Astra Tech AB, Mölndal, Sweden) were inserted in the mandibular premolar and/or molar areas of 32 patients. The treatment success was evaluated using the marginal bone level gain at 3 months, 6 months, and 1 year (the time point at which crown cementation was performed, i.e., immediately loaded) after the loading. The overall mean marginal bone level gain was -0.23 ± 0.59 mm at 3 months ($n = 33$), -0.24 ± 0.38 mm at 6 months ($n = 31$), and -0.29 ± 0.48 mm at 1 year ($n = 31$). A mean of one veneer was lost within 3 months. The observations over the 1-year period showed that one tooth showed an increase in marginal bone level of 1.60 mm. The success rate (survival rate) was 96.7% at 6 months and 93.8% at 1 year. Immediate loading of the tooth crown after implant placement with minimal or no manipulation of peri-implant tissues and insertion of a screw-retained crown is an effective alternative to an implant and fixed prosthesis.

Q: How to refer to android path like content:// in a content provider I am learning about android and I am stuck at this point. I just want to know how to use the paths like content:// and file:// in a content provider or in any other path. I want to read my weather forecast from the server. I used the following but I am getting nullpointer exception.

```
public String  
getDatabasePath() { //Cursor mCursor = mContext.getContentResolver().query( //  
ContactsContract.CommonDataKinds.Phone.CONTENT_URI,
