Each side can have a mix of tanks from the American, British, German, and Russian branches." Tank on Tank is an arcade-style game where you control one of the combat sides - as a tank commander you have to lead your team to victory against the enemy. This time you get the opportunity to choose from a variety of different tanks, from the American through to the Russian, and enjoy eleven different maps. You can also take part in the bonus game as a member of one of the tanks - the AI will give you a good fight in pretty much every scenario. The Tank On Tank Digital - East Front Battlepack 1 offers a variety of different action-packed scenarios, which can be played in groups, or individually. At the beginning of the game, each side is given two infantry. The first two turns are occupied by a preparation phase, which affects both sides, during which the enemy will be able to be seen, the tanks will move freely, and events will take place. The third turn is the combat phase, during which both tanks are activated, and the other side can move. This will make all the difference between winning and losing the game. These eleven different game-plans enable a true battle of wits and creativity. The end of the combat phase will be followed by the intelligence phase. During this phase, the tanks can be interrogated, recorded and marked for observation. For the rest of the game, the tanks will observe the enemy and attempt to outwit them, and for the last turn of the game, it is finally time to start making the decision-making phase - hopefully to win the game.

## Overview

Play Pyramid Defense by using the mouse or game pads to avoid deadly spikes and fireballs by moving your ship. The object of Pyramid Defense is to guide the small bomber above the pyramid to the exit by avoiding obstacles.

To start, click the game settings button. You'll have to select between "AI", "Single Player", "Cooperative", and "Competitive".

The game also has two game settings.

- **Vibra-tachina** - Enabling the Vibra-tachina gives you an extra ability to attack without controlling the ship. This option can be disabled by default. To turn it on simply select it under the Gameplay Settings.
- **Boom Blaster** - Enabling the Boom Blaster gives you an extra ability to fire multiple shots in the air. If you enable this feature, you'll have to specifically turn it off under the Gameplay Settings.
