As earlier, Adobe has added a feature called "Share for Review", which links relevant web-hosted images. Here, you can add comments and also pin images to "your pic list". There are also several of new filters available. The distortion could be used to achieve a certain look, or you can change the contrast for rougher (or more realistic) tones. There is also a feature now available that sharpens the image and removes blur. There are no other major changes. So, how does Lightroom 5 compare to Lightroom 4? You can get the answer in this review. So, how about some downsides? Authors are no longer able to locate a directory where the files are stored on the hard drive. I am not quite sure why it is so, but it seems to be a major omission. I can only hope that, someday, Lightroom would somehow make sure that it is also visible. This could make a big difference to some people. The Lightroom 5 Preview function seems to work only occasionally, as it wasn't able to open a rather common RTF (Corel WordPerfect) file for me. In the "Compatibility" section, I mentioned that I noticed scratches in some images. This is a limitation of any digital camera's sensor. Even if you craft your images in a way that scratches are eliminated in Lightroom, there's still something wrong with the file. In some cases, the camera may also have duplicated the image, for instance, in case you accidentally take two shots of the same object at the same time. Adobe now claims that "lossless RAW conversion for Fujifilm X-Trans is not supported". Hence, for X-Trans RAW files, the only solution is to switch to Adobe's bundled converter. This is not a big loss to me, however, as I don't like working with this RAW file anyway. Hopefully, Adobe will fix this issue sometime in the future.

Of course Photoshop is not the only software package from Adobe, but it is the best-known. Photoshop is going to celebrate its 50th birthday in 2015 and plans to introduce new special effects features for that occasion. With these special effects, a significant amount of money and time will be spent to create them entirely. Photos of past events are going to be analysed to find out how images have changed over the last 50 years. If everything goes as expected, the result should be a new addition to Photoshop. Instead of the usual yearly update, Adobe will go for a special 50th birthday upgrade. A lot of time and resources will be spent to create the project. It is estimated that this special project will take about four years to complete.
