When a file is opened in Photoshop, the attributes are set for the file and remain that way until the file is saved. For every pixel in a picture, Photoshop stores the following attributes in the photograph's file:

- **Dimensions** — Image width and height
- **Resolution** — File size, or dots per inch, or pixels per inch
- **Color Mode** — Where color is created. For example, sRGB, CMYC, etc.
- **Bits per pixel** — Total number of pixels in the image. For example, 8, 16, 24, and 32-bit color

- **Contrast** — Image intensity, contrast, or clarity, expressed as percentages from 0 to 100
- **Saturation** — Black and white (in PostScript, the equivalent of negative lighting)
