One of the most exciting new features of Lightroom 5 is its ability to highlight images. It is now so easy to see all of your images at a quick glance without having to visually scan them all. In addition, it is now much easier to create and edit smart collections. With the ability to quickly share your images, keep track of the images you are not working on and accomplish quick tasks like the ability to quickly export images to your desktop. **Import New Features**

- Import Videos

- Import Videos has just been improved. You can now sync videos to a new location, and then quickly get back to your original files. Plus, you can now import them as a bottom layer instead of adding them to the same location you are currently in. This can be helpful for retaining the basic location of the original files since you are always adding the layers as a bottom layer. **Edit**

- Selective Adjust

- The Selective Adjust feature now allows you to make adjustments to specific layers or groups of layers. For example, you can adjust the exposure, but not the clarity. **Make**

- Content Aware Move

- Content Aware Move allows you to automatically crop your picture to the best content. This will save you time if you are cropping images from time to time, like every time you edit a photo. With the advent of Resize Layers and Ready Layers, Lightroom's labelling features have become more powerful. This is a great example of data plan refinement and the sort of functionality Lightroom has been gaining, to the point where it can stand toe-to-toe with any image management and RAW converter tool.

As with Premiere Elements, the software has a deep editing-tool set that includes such features as a toolbox, a selection tool, masks, layers, vectors, textures, adjustment layers, filters, and 3D sculpting. You can also apply geometric effects, such as perspective controls, shear, and rotation. The Scratch&Build layers technology built into the software lets you paint on layers to add special effects to images. You can draw directly on an image, then add paint strokes, scribbles, and strokes—or shape and style the strokes into various elements like people, product faces, or planes. Other big changes to Photoshop include a new, more powerful 'Content Aware Fill' for replacing content in photos, and the ability to see the 'dark corners' become a regular feature in the 2020 version of Photoshop. There's also a new selection tool, and the new Layer panel includes all the details you'd expect from a photo editing tool - a Brush tool, Move tool, Eraser tool (new), Scale, Rotate and Flip tools, Layer effects, Refine Edge, a Color Blend tool and more.
